Progress Report

1. The following tasks have been completed
    a. Research how to create a chrome extension and understand all the various concepts involved
    b. Initialize chrome extension project
    c. Implement skeleton and test extension
2. The following tasks are pending
    a. Design architecture for annotation extension
    b. Design and implement annotations in HTML/CSS
    c. Create persistent storage and retrieval mechanism for storing annotations
    d. Display existing annotations for a specific github code file/SHA
    e. Allow user to create annotations for a specific github code file/SHA with text content
    f. Allow user to delete annotations
    g. Create presentation and write-up materials for project
3. I am not currently facing any obstacles that are blocking my progress. The main challenge so far has been wrapping my head around the structure and concepts of a chrome extension as they are very specific to chrome (background scripts, content scripts, etc) however I have made good progress.
